DETAILED ACTION

Response to Arguments

1. Applicant's amendment filed on 19 December 2005 has been entered.

Applicant's response to the rejection of the last Office action places the application in condition for allowance, and, therefore, the finality of that action is withdrawn.

Applicant's arguments, see REMARKS, filed 19 December 2005, as applied to the amended claims have been fully considered and are persuasive for the reasons stated in the Interview Summary filed 17 November 2005. The rejection(s) of Claims 1-3, 5, 7 and 9-12 have been withdrawn.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

Regarding **Claim 4**, please see Paragraph 9 of the Office Action filed 11 October 2005, *i.e.*, to summarize, since the thermowell of **SCHLIEPHAKE** is in the catalyst bed, Examiner agreed that it cannot be modified to function as claimed by Applicant, to measure the temperature behind an inner surface of the reactor wall, which would be outside of the process volume in the reactor of **NAJJAR**. If it were moved to a location behind an inner surface of the reactor wall in the reactor of **NAJJAR**, then the thermowell would no longer necessarily be covered by a layer of a catalytic material of the catalyst bed as claimed by Applicant.

Regarding **Claim 6**, please see Paragraph 8 of the Office Action filed 11 October 2005, *i.e.*, to summarize, since the thermowell of **SCHLIEPHAKE** is in the catalyst bed, it cannot be used to measure the temperature upstream of the catalyst bed as claimed, since it would no longer be covered by a layer of a catalytic material.

Claims 1, 10 and 12 are allowable because the prior art fails to teach or fairly suggest a method or temperature measurement instrument as claimed by Applicant wherein a layer of a catalytic material is formed on and at least partly covers the

thermowell, and wherein the layer of catalytic material is active in at least one endothermic catalyzing steam reforming reaction, including the limitation of inserting the thermowell into a reactor wall so that the tip of the thermowell does not penetrate an inner chamber of the reactor, as defined in the claims, each arranged and functioning as recited in Claims 1, 10 and 12, in combination with the other limitations of the respective claims. Claims 2, 3, 5, 7, 9 and 11 are allowable by virtue of their dependency upon Claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
